E-commerce website

Home Page

nav bar

Nav bar has add to cart, product, login, signup, about, and contact-us

Filter feature

All -> show all product

Filter by type -> ex. Mobile will show all mobile, sunglasses show all sunglasses etc.

User story:

If user clicked on any product, he could see popup or redirect page with details of product

In details page can add it to cart

Add to cart only for users logged if user not logged ask him to log in

If user has no data, ask him to sign up

Add to cart User can see all his product and he can add more from this item

In Add to cart page there is shop more button and proceed to checkout

Shop more return to home page

Proceed to check out redirect to another page asking details of user

If user clicked on proceed will redirect to checkout page asking details of user and showing details of product

And in check out there is 2 button one confirm purchase and back to cart

confirm purchase just show successfully message

product button move to product section

about button move to section about on company with dummy data

contact-us move to section contact us

in contact-us there is form your email, your name, message and submit button

Hint:

You can use JSON file with dummy data to show product from it
You can use cookie or local storage as temp storage for you
You can check the demo attached with the project
Demo video for just simulate and you make your own idea
